Agosto 2015

# ¿Alguien se siente identificado?

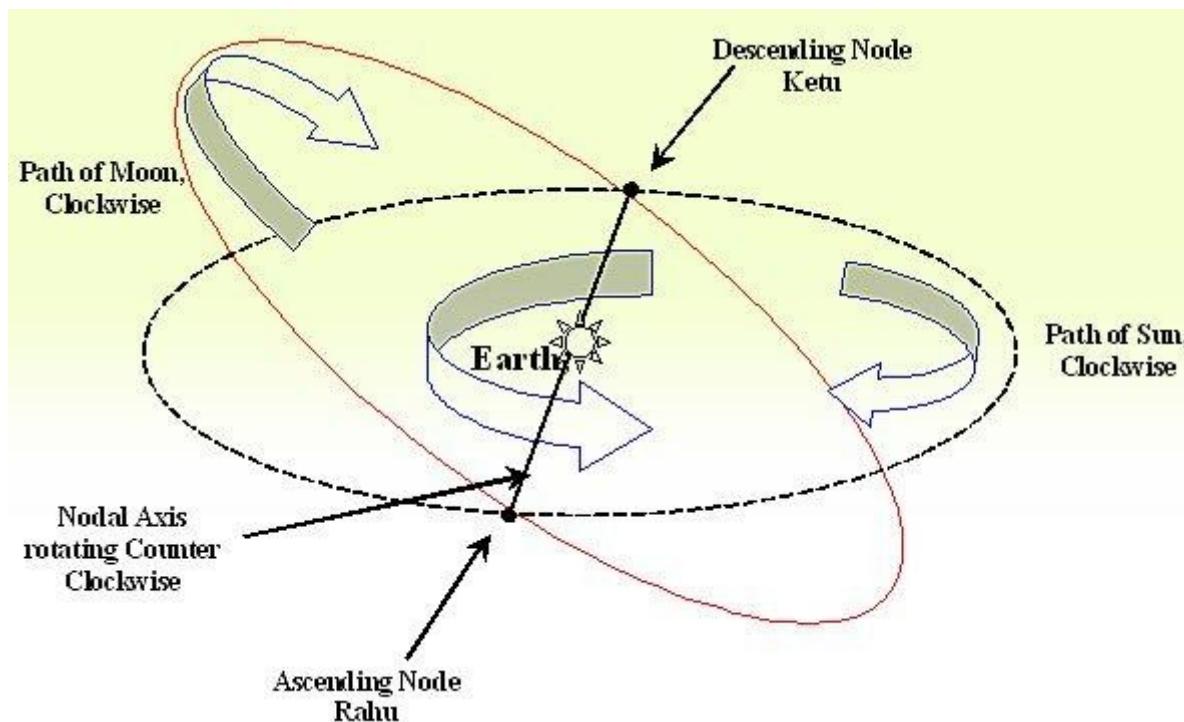

Llego el momento para desarrollar mas la vocación o profesión a través de sus talentos; y expresar la voluntad espiritual que lleva al progreso por la responsabilidad y el servicio a los demás. He aquí la meta interior que usted debe tener y que hace manifestar el principio del ego. Dicha actitud lo llevara a la liberación total como reto ineludible, y a la vida de la enseñanza espiritual. Usted debe alcanzar la plena expresión de sus facultades totales y de dicho crecimiento espiritual; descubra la verdad y su verdad personal para poder expresar la inteligencia o razón que hay en usted.

# ¿Alguien se siente identificado?

Mauricio Puerta conocido astrólogo.

### 1. ¿En qué momento decidió dedicarse a la astrología?

Eso no se decide, eso sucede si está en el destino. La astrología se me apareció hace 41 años, a la par que el arqueólogo que soy. Y me dediqué de lleno a ella hace 30 años.

### 2. ¿Qué parte del destino está en manos del hombre?

Primero tiene que conocer cuál es su destino para saber qué cosas no deben suceder en su vida.

# ¿Por qué la astrología sigue siendo popular?

- Da seguridad ante lo incierto.
- Promete una predicción del futuro.
- Tiene una base en la experiencia inmediata (el cielo está ahí) y es razonable pensar que el Universo nos influye.
- Tiene un andamiaje complejo que da una sensación de seguridad.

# El poder de la oscuridad

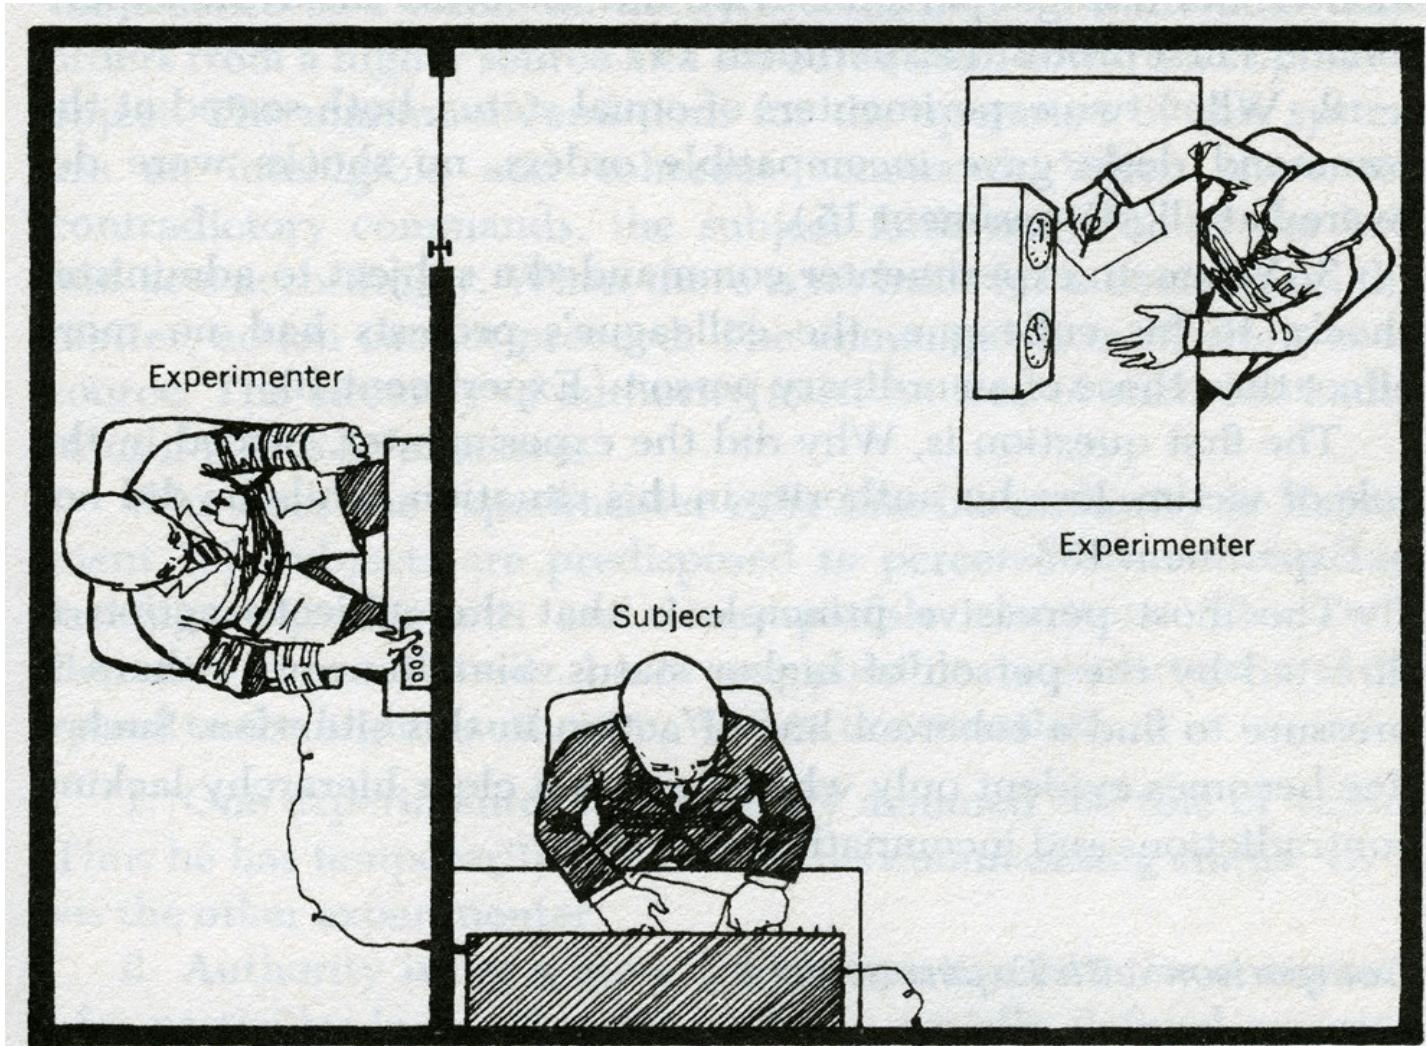

“Mientras los físicos hablaban de piedras que caen, balas de cañón y torres o pozos, nadie se inmutaba mayormente: pero cuando Einstein logró generalizar esos conocimientos diciendo que “el tensor G es nulo”, la gente de la calle dio vuelta la cabeza con estupor y corrió a arrodillarse ante el hombre que había emitido una idea tan asombrosa. ¡Qué lástima que Moliere se haya perdido una escena semejante!

Muy pocos corren a prosternarse, en cambio, ante Tolstoi o Stendhal. Leemos una página de Rojo y Negro y tenemos la curiosa creencia de que cualquiera de nosotros sería capaz de escribir algo parecido; pero tropezamos con una frase como “el tensor G es nulo” y nos ponemos a temblar de pavor y sentimiento de inferioridad.”

¿Es justo ejercer el  
poder del  
conocimiento sobre  
alguien que no lo  
entiende?

## Solar cycles and their relationship to human disease and adaptability.

### Abstract

In this paper, we show that 11-year solar cycle peaks predispose humans to disease, but also endow creativity and adaptability. We give several examples of diseases that are modulated by light and present evidence for an effect of intensity and variation in sunlight, primarily ultraviolet radiation (UVR), on the human genome. The birth dates of nearly 237,000 unique clients in the Maine Medicaid database collected from 1995 to 2004, inclusive, were related to solar cycle irradiance for the past seventy-one years, encompassing seven solar cycles. The sample was divided into four general categories of disease: mental/behavioral illnesses; metabolic diseases; autoimmune diseases; neoplasms. The birth months for those clients born in any given year were arranged in the form of a winter/summer ratio in order to more clearly appreciate the seasonality inherent in each disease category. Solar cycles were separated into chaotic (approximately three times as irradiant) or non-chaotic according to the Gutenberg-Richter power law and the uncertainty inherent in predicting solar storms. The results show that radiation peaks in solar cycles and particularly in chaotic solar cycles (CSCs) are associated with a higher incidence of mental disorders, suggesting the sensitivity of ectodermal embryonic tissues to UVR. Autoimmune diseases have intermediate sensitivity, while the neoplasms in the study, primarily of endoderm, appear suppressed by peak UVR intensity. The ratio of the number of clients born in CSC cycles to non-CSC cycles was highest for the more genetic mental diseases, like schizophrenia and bipolar disorder, but as that ratio decreased, the clients with diseases like multiple sclerosis and rheumatoid arthritis showed more environmental features manifested as a greater winter/summer birth month ratio that was significantly different than that of the average client in the whole data set. The paper presents evidence that latitude, e.g., variation in light, is an added stress to the immune system (especially at 53-54 degrees N. latitude) that is involved in nearly all human disease. We hypothesize that introns, the presumptive engenderers of gene control, modulate the effects of UVR, particularly for the neoplasms studied. We conclude that intermittent and largely unpredictable peak solar cycle radiation has been the fundamental engine of evolution, forcing organisms to adapt to mutagenic UVR and producing enough damage to instigate genetic variation. Probably a chance genetic mutation over 80,000 years ago produced a human brain capable of abstract thought and consciousness. The slight genetic instability that favored an adaptable, creative brain also produced other somatic variations that present phenotypically as disease, but largely expressed after natural selection (reproduction) and associated with the inexorable entropy of aging.

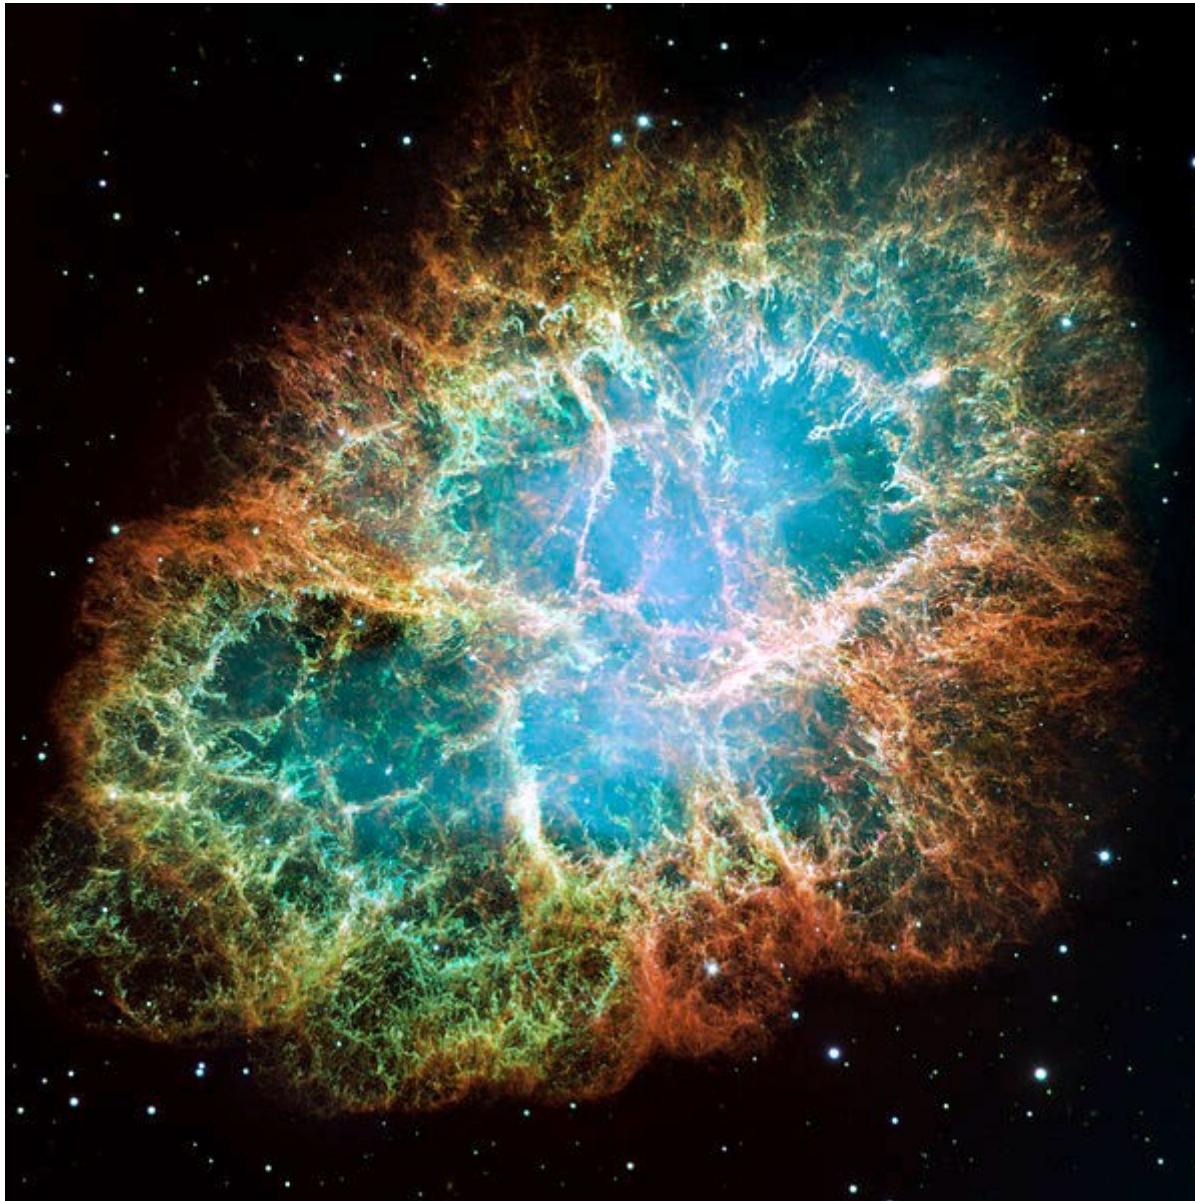

# Surprising: Researchers correlate rheumatoid arthritis and giant cell arteritis with solar cycles

Anthony Watts / June 16, 2015

From the DOE/Princeton Plasma Physics Laboratory

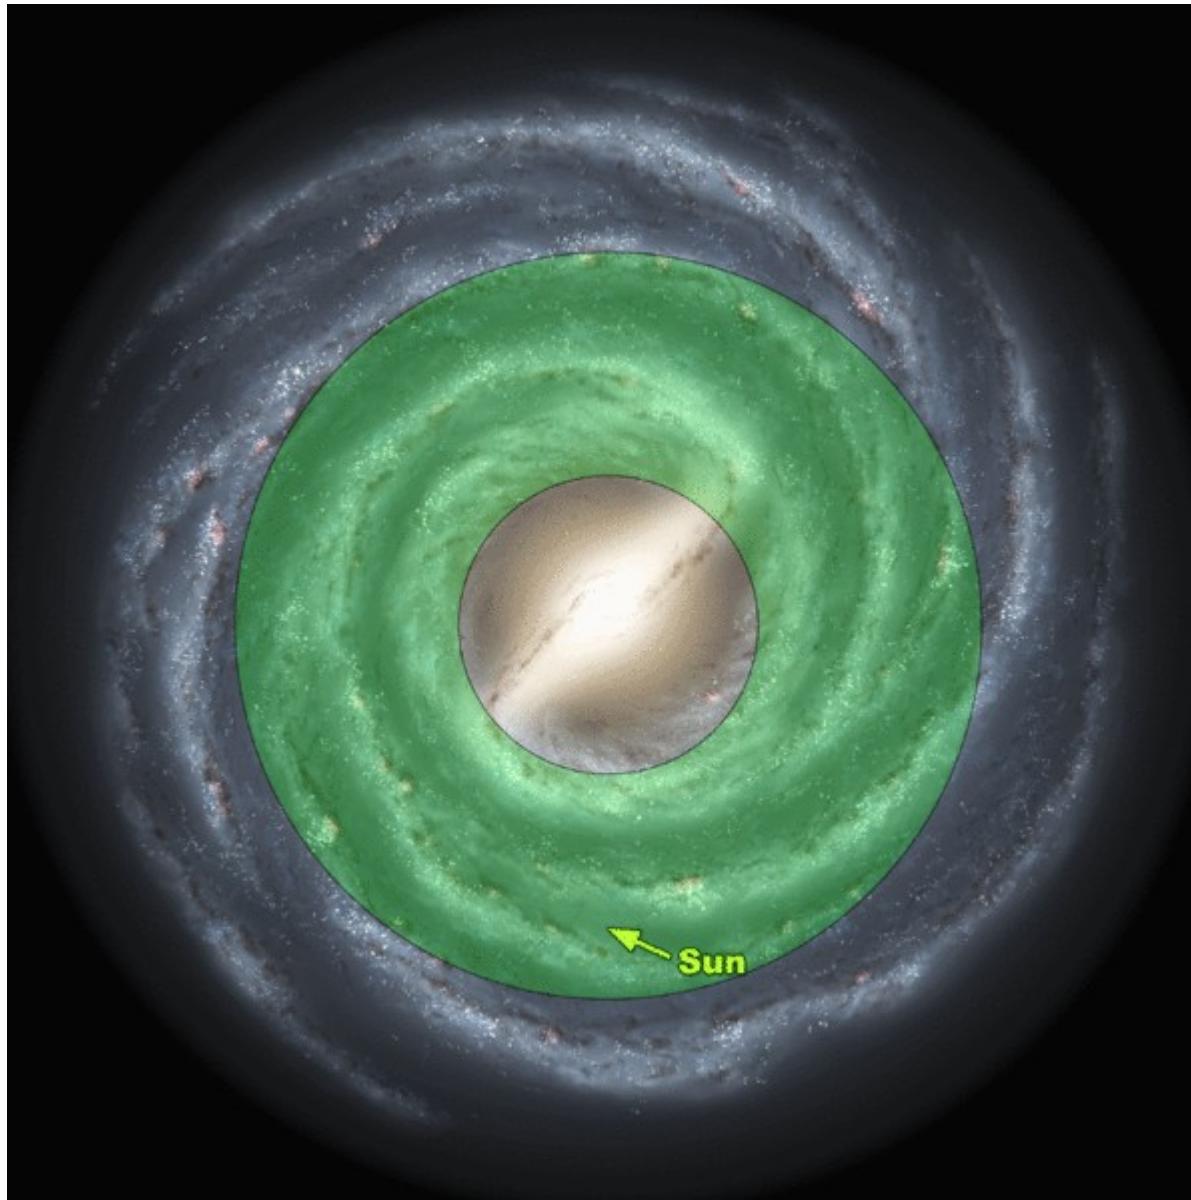

What began as a chat between husband and wife has evolved into an intriguing scientific discovery. The results, published in May in *BMJ* (formerly *British Medical Journal*) Open, show a “highly significant” correlation between periodic solar storms and incidences of rheumatoid arthritis (RA) and giant cell arteritis (GCA), two potentially debilitating autoimmune diseases. The findings by a rare collaboration of physicians and medical

It is troubling when so-called open-minded astrologers refuse to use multi-wavelength data. They prefer to stay firmly in the 1800s.

# Visión Junguiana de la astrología

## Jung and Astrology

### Jung and Astrology

*"Astrology represents the summation of all the psychological knowledge of antiquity." C.G. Jung*

*"We often believe our true Self is housed in our personal myth--in the story of our lives. I think that's a mistake; especially when we take our personal dramas literally. I believe that we're larger than the "story of our life" and Carl Jung believed that too. He delved into the personal and collective unconscious and found that we are richer and deeper than we know. He understood that we are not as small as our life stories might suggest, and yet I believe it is an amusing truth that we are also never quite as real or large as advertised." ~elizabeth spring*

# Visión Junguiana de la astrología

**Astrology is of particular interest to the psychologist, since it contains a sort of psychological experience which we call projected - this means that we find the psychological facts as it were in the constellations. This originally gave rise to the idea that these factors derive from the stars, whereas they are merely in a relation of synchronicity with them. I admit that this is a very curious fact which throws a peculiar light on the structure of the human mind. ....**      Carl G. Jung  
**in 1947 in a letter to prof. B.V. Raman**
